The American Lamb Industry Roadmap Project

Final Presentation

December 10, 2013
Sections of this Presentation

- Project Background
- Situation Analysis – The Traditional Industry
- Situation Analysis – The Non-Traditional Industry
- Goals and Objectives
  1. Product Characteristics
  2. Demand Creation
  3. Productivity Improvement
  4. Industry Collaboration
- Action Steps
- Execution Process
Project Background
Purpose of this Assignment

To identify and analyze the major challenges facing the American lamb industry, to propose the most effective solutions to those challenges, and to develop a strategy for the industry that will strengthen its short-term and long-term competitive advantage and return the industry to consistent profitability.
Ownership of the Industry Roadmap

- It appears that this project has become commonly known as “The Hale Report.”
- The Hale Group urges the industry to discontinue using that term.
- The Roadmap was developed by:
  - Participants from all segments of the industry
  - Participants from all national sheep industry organizations
- It does not “belong” to The Hale Group or the American Lamb Board.

The Lamb Industry Roadmap is owned by the American Lamb Industry.
The Roadmap and Other Industry Activities

Furthermore, the Roadmap strongly endorses the many activities currently being implemented by:

- American Sheep Industry Association
- American Lamb Board
- National Lamb Feeders Association
- National Sheep Industry Improvement Center
- National Sheep Improvement Program
- State sheep associations
- Industry meat associations
- Land grant universities with sheep research, education, and extension programs
- USDA agencies that support the sheep industry
- Individual industry participants
The Roadmap and Other Industry Activities (Continued)

- If adopted by the industry, the Roadmap supplements the many other efforts to enhance the future of the industry.

- The Roadmap assumes that all sheep industry organizations will continue to pursue their mandate and continue to implement their unique activities.

- The Roadmap focuses on several areas where the Industry Advisory Group believes new or renewed efforts are required.

- The following slides mention only a few current programs of the sheep industry organizations that must be continued.
Support for Ongoing ASI Activities

- Accurate data from many participants in the industry is critical.
- As the lamb industry becomes smaller, the data reported by USDA through MLR becomes less reliable.
- Clearly, the need for accurate information and unbiased analysis is as great now as it ever has been.
- ASI should be commended for taking the lead in initiating action with USDA to adjust the Livestock Mandatory Reporting requirements.
- The Roadmap supports ASI in seeking appropriate changes as quickly as possible.
- The definition of “lamb” and yearling animals should be consistent with the overall industry goal of providing consumers with a positive and repeatable eating experience.
Support for Ongoing ASI Activities (Continued)

- ASI continues its regulatory advocacy work on behalf of sheep producers across the nation to prevent or mitigate ill-advised regulations on the sheep industry.

- These efforts are critical to the success of the entire industry.

- The Let’s Grow Program seeks to attract and support younger sheep producers in the industry.

- SSQA utilizes research and education to improve management during the production of safe and high-quality sheep products.

All of these efforts support and enhance the Industry Roadmap.
Support for Ongoing ALB Initiatives

Some of ALB’s activities include:

- **Qualitative research** with consumers
- **Improving culinary education** materials, chain restaurant promotions, summits with influential chefs
- **Expanding target markets**
- **Updating nutritional databases** to include grain-fed as well as grass-fed feeding regimens
- **Direct and Ethnic Marketing** assistance
- **Digital and social** media, Lamb Jams, other consumer outreach
- **USMEF proposals** targeting the Middle East
Support for Ongoing ALB Activities (Continued)

- ALB has momentum, investment, and ongoing programs in a number of key areas.
- There is a comprehensive strategic plan in place.
- Core activities such as market research will and should continue.
- The Roadmap strongly encourages a collaborative approach between American Lamb marketers and ALB in order to leverage key assets to the end of building demand.

ALB’s many useful programs are conducted on an annual budget of $2.5 million, in comparison to Australia’s lamb promotion budget for the U.S. of $6.7 million.
State Sheep Associations and Land Grant Universities

- The state sheep associations conduct programs that are tailored to assist sheep producers in their state.

- In addition, the state associations conduct vital advocacy work on issues of state legislation and regulation.

- Many land grant universities have programs to support sheep producers through research, education, and extension.

- These programs are all vital for the future well-being of the lamb industry.
The Roadmap: A Process, Not a Report

- This project is about the beginning of a **PROCESS** – not about creating a report.

- The report will be our **INITIAL** Roadmap for the industry.

- But the Roadmap will change and evolve over time as new events occur and as the industry learns from the implementation effort.

- Some suggestions from industry participants are not included in this presentation, not because they were invalid, but because the Roadmap had to prioritize the initiatives to be accomplished in the next few years.

- Other issues can, and will, be addressed as the Roadmap unfolds.

- The industry is at the **BEGINNING** of a process.
Level of Detail

- This presentation provides more detail than the Progress Presentation.

- These slides have also added some new material that was not in the Progress Presentation.

- A PowerPoint presentation can hit the highlights, but has difficulty in providing all the details.

- A written report at the end of the project will provide more detail.

- The various initiatives will add even more detail over the next few years of implementation.
The Use of Working Groups

- A 19-person Industry Advisory Group was appointed to guide this project.
- In its first meeting, the Industry Advisory Group identified five major areas for research and investigation:
  - Awareness and Promotion of Lamb
  - Meat Quality and Consistency
  - Productivity Improvement
  - Seasonality Management
  - Information Transparency and Industry Collaboration
- Each member of the Industry Advisory Group was assigned to one of five small Working Groups.
- Each Working Group addressed one of the above topics.
- These recommendations are based heavily, but not exclusively, on the Working Group participants’ work.
# Members of the Five Working Groups

## Awareness and Promotion
- Reed Anderson, Oregon
- Nick Forrest, Ohio
- John Oswalt, Michigan
- Gary Pfeiffer, California

## Meat Quality and Consistency
- Richard Drake, Colorado
- Bill Fosher, New Hampshire
- Dennis Stiffler, New York
- Henry Zerby, Ohio

## Seasonality Management
- Dan Lippert, Minnesota
- Frank Moore, Wyoming
- Butch Theos, Colorado

## Productivity Improvement
- Richard Hamilton, California
- Burdell Johnson, North Dakota
- Kathy Soder, Pennsylvania
- Clark Willis, Utah

## Information Transparency & Industry Collaboration
- Greg Ahart, California
- Greg Deakin, Illinois
- Clint Krebs, Oregon
- Pierce Miller, Texas
## Use of Terms in this Presentation

Industry participants use the terms “traditional” and “non-traditional” in different ways. The table below indicates how this presentation uses these terms.

<table>
<thead>
<tr>
<th>Market Channels of the American Lamb Industry</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Traditional Market Channel</strong></td>
</tr>
<tr>
<td>- Producers and feeders sell live lambs</td>
</tr>
<tr>
<td>- Packers and fabricators sell meat to retailers and foodservice firms</td>
</tr>
<tr>
<td>- Consumers buy lamb meat from retailers and foodservice firms</td>
</tr>
<tr>
<td>- The markets set prices</td>
</tr>
<tr>
<td></td>
</tr>
</tbody>
</table>
Different Segments but with Influence on Each Other

These two go-to-market channels take very different routes to market, yet each has an effect or influence on the other’s success.

- Lamb marketers in either marketing channel risk losing a customer that has a negative dining experience from product with low quality standards that was supplied by the other marketing channel.

- Consumers can be confused over inconsistent marketing messages from highly independent lamb marketers.

- A reduction in industry infrastructure is felt by both the traditional and non-traditional marketing channel.

The two market channels do not exist in isolation, and some producers participate in both channels!
### Use of Terms in this Presentation

#### Market Segments of the American Lamb Industry

<table>
<thead>
<tr>
<th>Ethnic Market Segments</th>
<th>Other Market Segments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Muslim people</td>
<td>All other population groups not included in the “ethnic” groups</td>
</tr>
<tr>
<td>Mediterranean peoples</td>
<td></td>
</tr>
<tr>
<td>Jewish people</td>
<td></td>
</tr>
<tr>
<td>Hispanic people</td>
<td></td>
</tr>
<tr>
<td>Hindu people</td>
<td></td>
</tr>
<tr>
<td>Other ethnic groups that eat lamb regularly</td>
<td></td>
</tr>
</tbody>
</table>

*Note: Ethnic people buy from BOTH the traditional channel and the non-traditional channel. Direct marketers sell into BOTH the ethnic markets and the other market segments.*
Typical Flow of Product and Relationships

Traditional Market Channel

Producers typically get little feedback from customers or consumers

Non-Traditional Market Channel

Producers get direct, personal feedback from customers and/or consumers
Vastly Different Segments of the Industry

<table>
<thead>
<tr>
<th>Traditional Market Channel</th>
<th>Non-Traditional Market Channel</th>
</tr>
</thead>
<tbody>
<tr>
<td>Produces the larger volume</td>
<td>Produces a smaller volume</td>
</tr>
<tr>
<td>Many producers do not get paid for delivering high quality carcasses</td>
<td>Producers get personal feedback on what consumers want</td>
</tr>
<tr>
<td>Has experienced a long decline in production</td>
<td>Producers are growing rapidly – can’t keep up with demand</td>
</tr>
<tr>
<td>Has experienced highly variable profitability</td>
<td>Producers experience much less price volatility, and at price levels where they can be profitable on a regular basis</td>
</tr>
</tbody>
</table>

These two go-to-market channels are very different routes to market.
Situation Analysis – Traditional Industry
Industry Challenge: Decline in U.S. Lamb Consumption

![Graph showing the decline in U.S. lamb consumption from 1980 to 2012. The graph displays the total pounds of lamb consumed, US production, and imports over time. The source is USDA, Economic Research Service.]
Industry Challenge: High Price Compared to Other Meats

Composite Retail Price per Pound, 2010

- Chicken: $1.75
- Pork: $3.11
- Beef: $4.02
- Lamb: $5.75

The year 2010 was selected to avoid 2011 with very high lamb prices and 2012 with very low prices.

Source: USDA, Economic Research Service and Fresh Look reports
## SWOT Analysis of Traditional Market Channel

<table>
<thead>
<tr>
<th>Strengths</th>
<th>Weaknesses</th>
</tr>
</thead>
<tbody>
<tr>
<td>Lamb meat is flavorful</td>
<td>Lamb meat is high priced</td>
</tr>
<tr>
<td>Lamb has highly desirable nutritional profile, esp for women and elderly</td>
<td>Lamb meat quality is quite variable, particularly fat cover</td>
</tr>
<tr>
<td>Satisfies consumer desire for food variety</td>
<td>Industry has limited funds for promotion</td>
</tr>
<tr>
<td>Geographic dispersion makes direct marketing more viable</td>
<td>Price discovery and reporting are not efficient and transparent</td>
</tr>
<tr>
<td>Can be finished on grass or corn</td>
<td>Consumption of U.S. lamb has been declining for decades</td>
</tr>
<tr>
<td>Fresh product availability</td>
<td>Limited value added offerings <em>versus</em> other proteins</td>
</tr>
</tbody>
</table>
## SWOT Analysis of Traditional Market Channel (Continued)

<table>
<thead>
<tr>
<th>Opportunities</th>
<th>Threats</th>
</tr>
</thead>
<tbody>
<tr>
<td>Capitalize on lamb’s unique flavor and consumers’ desire for variety</td>
<td>Imported lamb is more consistent</td>
</tr>
<tr>
<td>Position lamb as “the premier” meat</td>
<td>Reduction in Federal grazing land or significant increase in fees</td>
</tr>
<tr>
<td>Promote the health qualities of lamb</td>
<td>U.S. consumption of all meat is flat to declining</td>
</tr>
<tr>
<td>Ethnic markets have room to grow</td>
<td>Credit is increasingly difficult to get for producers</td>
</tr>
<tr>
<td>Capitalize on market for “local food”</td>
<td>Some retailers could discontinue carrying lamb</td>
</tr>
<tr>
<td>New products / innovation</td>
<td>Loss of additional processing capacity</td>
</tr>
</tbody>
</table>
Value Proposition of Traditional Channel Must Change

- Local
- Convenient
- Nutritious
- Sustainable
- Available
- On-Trend

Consumer Value Proposition

High Price
Eating Quality
Two Visions for Future for the Traditional Channel

Aggressive Change

- Major change in the way the industry works
- Investment in the future
- Growth in U.S. production
- Profitability

We’ve Always Done It This Way

- Further decline
- Collapse of supporting infrastructure
- Imports grow to 80%+ of U.S. consumption
- Mass exodus from the industry
Consumption Decline of American Lamb Meat

4.87 lb. to 0.31 lb.

Insanity: Doing the same thing over and over again and expecting different results.

– Albert Einstein

Source: Economic Research Service, USDA, supply and disappearance data
5 and 10 Years from Now without Aggressive Change

<table>
<thead>
<tr>
<th>5 Years From Now</th>
<th>10 Years From Now</th>
</tr>
</thead>
<tbody>
<tr>
<td>Imports are 80% of U.S. consumption</td>
<td>The traditional marketing channel has collapsed</td>
</tr>
<tr>
<td>American lamb prices remain low</td>
<td>No large packing plants</td>
</tr>
<tr>
<td>Many commercial producers exit the U.S. lamb industry</td>
<td>The non-traditional marketing channel is very profitable and has grown dramatically</td>
</tr>
<tr>
<td>More industry infrastructure leaves</td>
<td>Small, regional packing plants have expanded</td>
</tr>
<tr>
<td>The traditional marketing channel is on verge of collapse</td>
<td>Consumption of American lamb is starting to grow from very low base</td>
</tr>
</tbody>
</table>
A Vision for 10 Years from Now with Aggressive Change

- An industry highly responsive to consumer demands and market shifts
- A significant increase in demand within 10 years.
- Dramatic reductions in fat content of lamb and improvement in product consistency
- Majority of lambs sold on value-based pricing system
- A more collaborative, coordinated industry with industry leadership driving change
- Every sector of the industry experiences consistent profitability and makes investments in the future

There is hope. The traditional market channel for American lamb can grow and become profitable if it changes.
Conceptual Changes Required in the Sheep Industry

- Consumers’ definition of value must drive the entire industry.
  - Eating experience
  - Price
  - Availability
  - Convenience

- Producers must view themselves as being primarily in the meat business, not primarily in the lamb or wool business.

- All industry participants must be paid based on quality, not just quantity.

- The industry must be profitable on purely economic terms with no expectation of future financial support from the government.

- Sheep producers must make decisions based on “the numbers” and sound analysis, not tradition or intuition.

- The American lamb industry can be and must be a world class competitor in global lamb production.
Conceptual Changes Required in the Sheep Industry (Continued)

- The sheep industry **must make productivity improvements rapidly** to “make up for lost time” in comparison to foreign producers.

- Longer-term, **collaborative relationships between all industry sectors** must characterize the industry rather than short-term profit taking.

- **Every sector** is vitally important and must be profitable.

- Participants must take the **long-term view**, instead of maximizing **short-term profit today**.

- As the roadmap is implemented, each business participant in the industry – including individual producers – and each sheep industry organization would be well advised to **review its mission, organizational structure, and resources** to ensure that it can effectively meet **the needs of consumers** and serve the needs of **the future sheep industry**.
Situation Analysis – Non-Traditional Industry
Background

- Very little quantitative data is compiled on the Non-traditional market channel.
- The Hale Group’s research was conducted primarily through:
  - A large number of phone interviews with participants
  - A smaller number of “on-site visits”
- In the absence of “hard data,” we report on the non-traditional market channel primarily through comments made by participants in this channel. We have included selected quotes throughout the report from participants to convey the opinions and perspectives heard in the interviews.
- While much of the research was focused on participants East of the Mississippi River, the findings were supported by interviews with participants in the Midwest and West Coast as well.
- There are participants in the traditional and non-traditional market channels in the East, the Midwest, and the West.
Characteristics of Direct Marketers

- They are primarily lamb marketers and entrepreneurs
- Some are lamb producers secondarily
- They provide superb service to their customers
- They know their markets and customers intimately
- Some are newer to the business
- They are passionate about providing a premium product with a credible, authentic story behind it
- Many are fiercely independent
Layers of Niches and Micro-Niches

- Entrepreneurial lamb producers have been ingenious and innovative at finding their way to market
  - “We are a disparate group of entrepreneurs. We’re on our own, and it has worked for us.”
  - “It’s less about being lamb producers, and more about being niche marketers, finding an opportunity, finding ways to fill demand and make money.”

- Marketing is mostly done in an un-organized, yet effective, fashion

- Somewhat difficult to place the markets in clearly defined categories
  - Ethnic encompasses multiple sub-markets
  - Fine Dining splinters into different menu types
  - Direct marketing is accomplished in many ways

Note: Quotations from industry participants cited above are included to convey the opinions and perspectives heard in the interviews.
Layers of Niches and Micro-Niches (Continued)

- Nearly all lamb marketers do all the work to get their product to market on their own
  - Processors are not part of the marketing effort – act only as the custom slaughterer
- Lamb producers “own the relationship” with the buyer
- Some efforts have been made to bring some producers together, but usually to secure more lambs, and less frequently to jointly market
- Nearly every producer was naming their own customized price for product
  - “My buyers don’t care about market price, they accept my price, which gets them the lamb they want.”
  - “I haven’t raised or lowered my price in three years. Each of those years I have made money and have never lost a customer due to price.”

Note: Quotations from industry participants cited above are included to convey the opinions and perspectives heard in the interviews.
Layers of Niches and Micro-Niches (Continued)

**Examples of target markets from interviewees**

- Not all ethnic markets are the same . . .

<table>
<thead>
<tr>
<th>Ethnic</th>
<th>Muslim</th>
<th>Hispanic</th>
<th>Hindu</th>
<th>Eastern European</th>
<th>W European</th>
</tr>
</thead>
<tbody>
<tr>
<td>Middle East</td>

<td>Internet sales</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Special events (family outings, weddings)</td>
<td></td>
</tr>
</tbody>
</table>
Direct marketers use a variety of channels and approaches to get to market. These are some of the ways direct marketers sell:

- Live On-Farm Sale
- Slaughter
- Auction
- Live trucking to buyer/slaughter
- Retail Distribution
- Internet Sales
- Food Co-Op
- Independent Restaurant
- Farmers’ Market

Important Note!
Direct Marketing Works Everywhere!
Descriptors of Direct Marketers

- Adaptable
- Profitable
- Market-Driven
- Independent
- Insulated from Commodity Market
- Laser-Focused on Customer
- Short on Resource Support

Slide 42
Non-Traditional Marketing

- The characteristics describing the Eastern producers/marketers are not unique to them.

- It is a *mindset* rather than something specific to the non-traditional marketer.

- Proximity to ethnic groups, access to consumers, and diverse marketing channels exist in many other parts of the country.

- The decision to pursue these non-traditional channels is a personal preference, rather than an exclusive opportunity available only to a small group of producers.
Attractive Opportunities Exist

Two common themes emerged from nearly the entire pool of interviewees – demand outstrips supply and there is little price sensitivity.

- “I put the sign out front, and the buyers just show up.” – Maryland
- “I don’t think in terms of $/lb. I have to think $/head like my customer, and at $150/head I don’t have to worry either.” – Virginia
- “We should pull back on marketing to the general public. The heavy consumers of lamb are growing on their own.” – New York
- “We don’t have enough supply to keep pace.” – Maine
- “There is a severe shortage of fresh lambs in the Miami market.” – Florida
- “I have never dropped my price in the last two years, and I have never lost a customer.” – Massachusetts

Note: Quotations from industry participants cited above are included to convey the opinions and perspectives heard in the interviews.
Industry Challenges for Direct Marketers

- As a result of the independent, entrepreneurial efforts of marketing lamb, one of the challenges is that the Eastern U.S. lacks strong leadership for large numbers of producers in the non-traditional channel that can drive initiatives on a larger scale.
  - “Not many of us trust each other.”
  - “I have a good market; would rather do it myself.”
  - “Many producers will not come together to grow their niche to its peak, as they like the money they are making.”

- Many efforts have been tried to organize producers into a marketing pool or loosely structured group, yet many of these lacked a leader who could keep producers focused and committed to serving their niche.
  - “Producers stray to the highest price.” – Virginia co-op effort

Note: Quotations from industry participants cited above are included to convey the opinions and perspectives heard in the interviews.
Industry Challenges for Direct Marketers (Continued)

- Numerous participants desired greater alignment between commercial producers, seedstock producers, producers who show animals, and club lamb participants.

- Producers keenly feel the loss of industry infrastructure.

- Great concern was expressed that too few young people stay in sheep production after college.

- Many industry participants felt there is inadequate effort on what commercial producers need to improve meat quality, yield, taste, etc.
Non-Traditional and Traditional Channels Face Similar Challenges

- Loss of basic research and support infrastructure
- Un-filled university and extension positions in sheep/lamb production
- Loss of flocks at universities – Cornell’s flock of 300 ewes latest at risk
- Research funding directed to biomedical work, not basic research
- Few trained in basic husbandry, e.g., shearing
- One scientist funding graduate work with his own personal money
- Research results not being fully communicated to producers

The production and operational challenges of producers in the non-traditional and traditional channel are remarkably similar.
### SWOT Analysis of Non-Traditional Market Channel

<table>
<thead>
<tr>
<th>Strengths</th>
<th>Weaknesses</th>
</tr>
</thead>
<tbody>
<tr>
<td>➢ Lamb meat is flavorful</td>
<td>➢ No collaborative effort to maximize market potential</td>
</tr>
<tr>
<td>➢ Producers give customers the quality they want</td>
<td>➢ Limited scale, leverage</td>
</tr>
<tr>
<td>➢ Pricing is generally stable with all participants making a profit</td>
<td>➢ Different marketing messages creates potential to confuse consumers</td>
</tr>
<tr>
<td>➢ Market growth rate is believed to be very attractive (though not quantified)</td>
<td>➢ Constraints to slaughter / fabrication capacity</td>
</tr>
<tr>
<td>➢ Lamb has highly desirable nutritional profile, esp for women and elderly</td>
<td>➢ Seasonality of business still effects some markets</td>
</tr>
<tr>
<td>➢ Participants tend to adapt to change quickly</td>
<td>➢ Capital constraints</td>
</tr>
<tr>
<td>➢ Producers have shorter distances to target markets</td>
<td>➢ Lamb is sometimes only a portion of the total enterprise and the owner’s focus</td>
</tr>
</tbody>
</table>
### SWOT Analysis of Non-Traditional Market Channel (Continued)

<table>
<thead>
<tr>
<th>Opportunities</th>
<th>Threats</th>
</tr>
</thead>
<tbody>
<tr>
<td>➢ Ethnic markets have room to grow, and favorable demographics exist in the US</td>
<td>➢ U.S. consumption of all meat is flat to declining</td>
</tr>
<tr>
<td>➢ Capitalize on market for “local food”</td>
<td>➢ Importers could move faster than entrepreneurs, stealing share and profits</td>
</tr>
<tr>
<td>➢ Capitalize on lamb’s unique flavor and consumers’ desire for variety</td>
<td>➢ Increased regulations imposed on these smaller players</td>
</tr>
<tr>
<td>➢ Position lamb as “the premier” meat</td>
<td>➢ Potential unfavorable reports on local lamb production or processing practices or conditions</td>
</tr>
<tr>
<td>➢ Promote the health qualities of lamb</td>
<td>➢ Inability to secure enough lambs with desired quality characteristics</td>
</tr>
</tbody>
</table>
Goals and Objectives
Structure of the Roadmap

- **Goals**: high-level desired industry accomplishments
  - **Objectives**: medium-level accomplishments required to achieve the goals
    - **Action Steps**: specific activities needed to accomplish the objectives
      - Actions
      - Timeframe
      - Activity Captain

- The role of the Activity Captain is to **lead** that specific action step, not necessarily **do** the work all by themselves, or fund the effort.

- Activity Captains can seek funding from any source and seek information and personnel support from any industry participant.

**Implementation of the Lamb Industry Roadmap**

is an industry-wide, collaborative effort.
The Four Major Areas Requiring Industry Goals

1. Product Characteristics
2. Demand Creation
3. Productivity Improvement
4. Industry Collaboration
Most of us over-estimate what we can do in one year, and under-estimate what we can do in ten years.

– Ted Engstrom (management guru)
Exponential Growth

Most growth is exponential, not straight-line growth.
An Investment, Not a “Quick-Fix”

The American Lamb industry has been in **decline for decades**.

The **solution will require a major, long-term investment** by all industry participants.

There is **no solution** which **will provide a quick return** of cash.
Four High-Level Goals

1. **Product Characteristics** – Improve eating characteristics and the consistency of American lamb products as defined by the Lamb Quality Audit.

2. **Demand Creation** – Achieve a significant increase in demand for American lamb meat as measured by the Demand Index.

3. **Productivity Improvement** – Achieve a significant increase in industry productivity with metrics to be defined.

Quantitative Goals

- Goals should be measurable and quantitative.
- At the moment, the industry does not have adequate data to determine reasonable, complementary, quantitative goals.
- An effort during the next year will be to provide initial metrics for measuring improvements in all goals.
  - This includes a revision of the Demand Index – which measures the strength of demand for lamb regardless of the current price or per capita consumption of lamb meat
  - A metric to measure industry-wide improvements in productivity
- After defining the metrics, the industry will track its progress in all areas in subsequent years.
Prioritization of the Goals

1. Make American lamb a premier product every time.
2. Promote lamb as a premier meat.
3. Improve productivity to remain competitive.
4. Work together as a whole industry.
Objectives for Goal 1 – Product Improvement

1. Adopt consumer-driven, value-based pricing for slaughter lambs
2. Improve the consumers’ eating experience of lamb
3. Install electronic grading at packing plants
4. Conduct a Lamb Quality Audit every three years
Objectives for Goal 2 – Demand Creation

1. Create a consumer-recognized and valued American Lamb brand limited to American lamb products of a defined quality

2. Develop innovative value-added products

3. Support non-traditional sheep producers across the country through a series of niche marketing activities

4. Explore the benefits and costs of alternative paths to market for American Lamb

5. Build the volume and value of the export market for American Lamb
Objectives for Goal 3 – Productivity Improvement

1. Promote widespread producer use of quantitative genetic selection

2. Reduce the seasonality of the lamb industry

3. Develop a long-term plan for U.S. sheep research and producer education
Objectives for Goal 4 – Industry Collaboration

1. Initiative a Rapid Response, Industry-Wide Communications Team
# Primary Beneficiaries of Major Initiatives

<td>Create industry communication team</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
Major Implementation Participants of 13 Initiatives

**Producers**
- Participate in value-based pricing
- Adopt quantitative genetic selection
- Reduce seasonality of lamb production
- Participate on industry-wide communications team

**Feedlots**
- Participate in value-based pricing
- Reduce seasonality of lamb production
- Participate on industry-wide communications team

**Packers**
- Adopt value-based pricing
- Utilize electronic grading
- Create American lamb brand
- Develop value-added products
- Reduce seasonality of lamb production
- Participate on industry-wide communications team

**Fabricators**
- Develop value-added products
- Create American lamb brand
- Participate on industry-wide communications team

No industry participant has to lead implementation of all 13 initiatives.
### Major Implementation Participants of 13 Initiatives (Continued)

No industry participant has to lead implementation of all 13 initiatives.
Action Steps
Objectives and Action Steps for Goal 1
Goal 1 – Product Characteristics

Goal – Improve the eating characteristics and consistency of American lamb products as defined by the Lamb Quality Audit.

Objectives:

1. Adopt consumer-driven, value-based pricing for slaughter lambs
2. Improve consumers’ eating experience of lamb
3. Install electronic grading at packing plants
4. Conduct a Lamb Quality Audit every three years
Rationale for Value-Based Pricing

- Lamb has the characteristics to be widely accepted as the “premier meat” – very desirable flavor and an extremely positive nutritional profile.

- Lamb can strengthen its position in the meat case if it promotes its attributes and delivers high quality product on every eating occasion.

- However, the industry acknowledges that excess fat and inconsistency are the U.S. lamb industry’s biggest detractions from its premier status.

- Buying slaughter animals on weight provides incentive to overfeed lambs under certain market conditions – resulting in excess fat.

- Buying on weight and yield provides no economic incentive to produce high quality lamb.
Improving the eating experience of lamb for every lamb consumer on an absolutely consistent basis is a top priority for the American lamb industry.
Objective 1. Adopt Value-based Pricing for Slaughter Lambs

- The lamb industry uses value-based pricing in:
  - Australia
  - New Zealand
  - Europe

- Lamb imports have developed a reputation for being leaner and much more consistent quality than U.S. lamb.

- The most effective way for the U.S. to address excess fat and consistency is to:
  - Set a clear target for a highly desirable slaughter lamb
  - Provide economic incentive to producers and feeders to supply that target animal.
  - Provide disincentives to those who deliver poor quality lambs.
Objective 1. (Continued)
Adopt Value-based Pricing for Slaughter Lambs

- The market for lamb products is very fragmented.
- Different market segments want somewhat different characteristics (but none want lots of fat).
- The industry must rebuild its fragile market positioning after high prices, excess fat, and inconsistent product quality have eroded demand.
- The American consumer’s value proposition for American lamb must be rebuilt.
- Each packer must develop its own value-based pricing system.
  - There is not one “target lamb” that meets the needs of all consumers.
  - Packers may adopt multiple “targets” for the different segments they serve.
Initially, we urge all packers to use at least two characteristics in setting their target for lamb carcasses:

- Fat cover
- Conformation / muscling / percent lean

We recommend gradual introduction of value-based system

- First eliminate the most serious problems – the outliers that cause the most trouble – through discounts
- Gradually adjust and upgrade the quality characteristics – through rewards
- Adjust the pricing system as results from the Lamb Quality Audit become available

Plan future changes and give producers time to adapt the genetics to meet the future requirements.
Objective 1. (Continued)
Adopt Value-based Pricing for Slaughter Lambs

- Value-based pricing must:
  - Be directly connected to consumer desires
  - Be expressed in quantitative terms
  - Provide significant economic incentive and disincentive
  - Be explained to producers and feeders so they know how to adjust
  - Be applied to all lambs purchased

- The factual basis for assessing carcasses and producer payment must be provided on a timely basis

- Pricing schemes will vary from packer to packer and from season to season
An Example from the Beef Industry

In announcing a new Cargill program to market USDA labeled “USDA tender” or “USDA very tender” beef products.

We know that beef attributes such as tenderness, flavor and juiciness are important to consumers, and the long-term health of the American beef industry hinges on our ability to consistently deliver the best possible beef eating experience.

– John Keating, President, Cargill Beef

Source: “Cargill plant certified for ‘tender’ beef,” Fort Morgan Times news article, July 26, 2013, submitted to me by Benny Cox
The Pivotal Nature of Value-Based Pricing

Value-based pricing is the key to creating other critical changes in the American lamb industry. The lamb packers must take the lead in this initiative and producers and feeders must respond appropriately. If the packers do not execute this effort, the other recommendations in this Roadmap will have minimal effect.
Objective 1: Adopt Value-based Pricing for Slaughter Lambs

</tbody>
</table>
Objective 2. Improve Consumers’ Eating Experience of Lamb

Many industry participants agree that excessive fat has sometimes created a negative impression of lamb.

However, other factors also have an influence on consumers’ total eating experience:

- Taste
- Color
- Age – age of animal at harvest and length of time between harvest and eating
- Breed of sheep
- Feedstuffs
- Animal stress
- Portion size
- Other factors
Objective 2. (Continued)

Improve Consumers’ Eating Experience of Lamb

- Many of the data on these characteristics are dated and/or incomplete.
- The industry needs to compile and analyze all available data that affects the consumer eating experience.
- Any critical gaps in data that have a major bearing on consumer response must be filled.
- Based on the factual findings, action must be taken to ensure that consumers always have an extremely positive experience when eating American lamb.
- If needed, address any regulatory barriers to improved quality lamb.
## Objective 2. (Continued)

</table>

This is not a one-time event. This should become an on-going activity.
Objective 3.
Install Electronic Grading at Packing Plants

Rationale

- Electronic grading has been used by other meat species in the U.S. for years.
- Electronic grading has proven to provide more accurate predictability of certain quality and cutability parameters than subjective human grading.
- It provides more detailed information than manual systems.
Current Status of Electronic Grading

- Electronic grading equipment has been installed in the JBS plant in Colorado.
- USDA is conducting their standardization trials in the fall of 2013.
- Data will need to be evaluated and approval for industry use by USDA should be completed by roughly the end of December 2013.
- Colorado State and a USDA economist are conducting an industry assessment and ROI analysis for industry consideration to be completed by end of December 2013.
## Objective 3.

Objective 4. Conduct a Lamb Quality Audit Every Three Years

- There is nearly unanimous agreement in the industry that lamb characteristics MUST be improved.
- Most of the data about lamb quality is anecdotal, not quantitative.
- There is no robust data to document the level of meat quality currently.
- The U.S. chicken, pork, and beef industries have a much more extensive knowledge of their quality problems and what their future priorities should be.
- Imported lamb has developed a strong reputation for being much more consistent than American lamb.
- If the American lamb industry is going to survive, it has to know **What** to improve and **How** to improve its eating characteristics.
Results of the National Beef Quality Audit

- The National Beef Quality Audit (NBQA) has been conducted every 5 years since 1991.

- Its purpose is to enhance producer profitability by improving the qualities and desirability of beef.

- Premise – You can’t manage what you don’t measure.

- In 1991 and 1995 the NCBA estimated that the industry was losing an average of $138 per head due to quality defects.

- The 2011 Audit reported that losses due to quality and management defects had declined to $44 per head.

The Beef Quality Audit has resulted in meat quality improvements AND cost reductions.
Objective 4.
Conduct a Lamb Quality Audit Every Three Years

- Of necessity, the Lamb Quality Audit will have a more focused scope than that for beef due to budgetary constraints.

- However, we recommend that it be conducted every three years initially to provide more frequent feedback to the lamb industry in executing the Roadmap.
Objective 4. (Continued)
Conduct a Lamb Quality Audit Every Three Years

Objectives and Action Steps for Goal 2
Goal 2 – Demand Creation

**Goal** – Achieve a significant increase in demand for American lamb meat as measured by the Demand Index.

1. Create a consumer-recognized and valued American Lamb brand limited to American lamb products of a defined quality

2. Develop innovative value-added products – which can stem from fabrication, packaging, further processing, yearling / mutton, or other mechanisms

3. Support non-traditional sheep producers across the country through a series of niche market investments and activities

4. Explore the benefits and costs of alternative paths to market for American Lamb

5. Build the volume and relative value of the export market for American Lamb
Objective 1. Create a Consumer-Recognized Brand

Rationale

- American Lamb is typically more expensive than imported lamb

- Industry experts, including retail and foodservice buyers, agree the flavor profile and other characteristics of American Lamb make it a potentially superior product in objective terms
  - The Lamb Quality Audit will provide benchmark data

- Creating a consumer-oriented American Lamb brand, with clear quality standards and market positioning, will provide American Lamb marketers with a competitive advantage and help solidify consumer preference for American Lamb

- Overarching food trends favor American Lamb: local, sustainable, concern for improving nutrition, and social responsibility
## Objective 1.
### American Lamb Brand

<table>

</tbody>
</table>
Objective 2. Develop Innovative Value-added American Lamb Products

Rationale

- American Lamb competes in a protein marketplace with an extensive portfolio of value-added products developed to meet the needs of consumers and chefs.

- Value-added products can serve to use under-utilized cuts and enhance overall carcass value, as well as enhance the appeal and broaden the application of yearling and mutton products for targeted customers.

- Value-added products can also serve to employ further-processing and frozen technologies to extend availability and “smooth-out” seasonality.

- Consumers and foodservice operators want products that are convenient, labor-saving, flavorful, and varied, with an attractive price-value proposition.
## Objective 2.
Innovative New Product Development

<table>

<td>Consortium</td>
</tr>
</tbody>
</table>
Objective 3.
Support Sheep Producers’ Niche Marketing Efforts

Rationale

- The non-traditional market channel for American Lamb is fragmented and highly varied.
- The participants in this channel need support in their marketing activities.
- While it is not possible to fund individual entities with tailored marketing materials and activities, it is possible to create customizable programs and materials, as well as online resources with wide availability.
### Objective 3.
Support Niche Marketing Efforts

<table>
<thead>
<tr>
<th>Action Steps</th>
<th>2014</th>
<th>2015</th>
<th>2016</th>
<th>2017</th>

<td>X</td>
<td>X</td>
<td>X</td>
<td>ALB</td>
</tr>
</tbody>
</table>
Objective 4.
Explore Alternative Paths to Market

- With the explosion of “digital life” over the past few years, and the trend toward the networked consumer, product paths to market are being facilitated in many new ways.

- Social media, the penetration of smart phones, and the increased availability of data and information regarding market needs are all game-changers.

- Almost half of consumers say they will pay more for local products and, combined with digital marketplace, leads to
  - Amazon Fresh, others, for example

- Electronic ordering systems for lamb products reduce supermarket inventory requirements and may gradually increase lamb consumption throughout the year.
### Objective 4. (Continued)

**Explore Alternative Paths to Market**

</tbody>
</table>
Objective 5. 
Build the Volume and Value of the Export Market

Rationale

- The export market for U.S. lamb has been widely variable, with relatively low value per pound.

- NZ and AU producers have clear markets for their high-value lamb cuts across the world, strengthening their resource base.

- The cachet of American products can work to the benefit of the American Lamb industry.
## Objective 5.
### Build the Export Market

<table>
<thead>
<tr>
<th>Action Steps</th>
</tr>
</thead>
<tbody>
<tr>
<td>Create a White Paper for circulation to the industry that incorporates a market opportunity assessment and a cost benefit analysis of the various export markets for American Lamb, taking the approach of finding the best markets for each carcass component (Already underway at some level)</td>
</tr>
<tr>
<td>Assess USMEF findings and make recommendations to the industry</td>
</tr>
</tbody>
</table>
Objectives and Action Steps for Goal 3
Goal 3 – Productivity Improvement

Goal – Achieve a significant increase in industry productivity with metrics to be defined.

Objectives:
1. Promote widespread producer use of quantitative genetic selection
2. Reduce the seasonality of the lamb industry
3. Develop a long-term plan for U.S. sheep research and producer education
The High Importance of Productivity Improvement

American Producers
- Sell only American lambs
- Want consumers to buy only American lamb meat

Packers and Fabricators
- Packers and fabricators work to maximize their profits
- Selling American lamb is great
- Selling imported lamb is OK

The two industry sectors have different vested interests.

The only strategic option for American producers is to improve their beneficial characteristics and to work like hell to get their costs as close to AU and NZ as possible.
Objective 1.
Promote Quantitative Genetic Selection

Rationale

- Genetic selection is an indispensable tool for producers to:
  - Deliver meat characteristics desired by consumers
  - Produce lambs as cost-effectively as possible to compete with imports
- NSIP was formed to address this need, but few seedstock producers and commercial producers use its services
- Many reasons have been cited for low use of NSIP
- Whatever the reasons, genetic selection MUST become widely adopted by the U.S. industry
- NSIP should launch an assessment of how to reintroduce LambPlan and genetic selection to the U.S. industry
Objective 1. (Continued)
Promote Quantitative Genetic Selection

Re-introduce the NSIP to commercial and purebred producers:

- Engage in a strategic and organizational review of NSIP with the aim of re-introducing the organization and strengthening its resources.
- Create a strategy Task Force from across the industry to craft an appropriate direction for NSIP.
- Position it as “The” industry source for science-based sheep performance data and analysis.
- Ensure breed associations are fully engaged in this re-positioning and re-structuring process.
- Confer with other livestock improvement organizations to collect the best ideas to bring back to the sheep industry.
- Link genetic selection to value-based pricing for slaughter lambs.
Objective 1. (Continued)
Promote Quantitative Genetic Selection

Re-introduce the NSIP to commercial and purebred producers:

- Design an effective and broad communication plan to reach as much of the industry as possible
- Identify success stories among producers for use as models
- Identify funding sources that can support expanded reach and services
  - USDA and other science-based agricultural oriented organizations
  - Private sources, e.g., foundations
- Hire a full time Managing Director

Reintroduce NSIP as a vital tool to improve industry productivity.
Objective 1. (Continued)
Promote Quantitative Genetic Selection

<td></td>
<td>X</td>
<td>NSIP</td>
</tr>
</tbody>
</table>
Objective 2.
Reduce Seasonality of the Lamb Industry

- The lambing cycle is very pronounced.

- Given the peaks in demand for lamb at Easter, Thanksgiving, and Christmas, the slaughter cycle does not match consumption.

- The feeder sector provides a valuable function by partially matching production and consumption.

- However, the industry needs greater flexibility in matching supply and demand.

- The entire industry would benefit from less price volatility.
Objective 2. (Continued)
Reduce Seasonality of the Lamb Industry

- Reducing seasonality can be accomplished, at least partially, by packers and producers / feeders planning together
- Within limits, demand can be projected fairly well, week-to-week
- Packers should establish agreements with producers / feeders to supply a high percentage of their expected sales, for slaughter week-by-week
- Some producers will likely prefer a written contact; others may prefer a verbal agreement
- Packers should provide premiums for weeks when supply is typically lower than sales

To create pricing stability in the industry, producers, feeders, and packers must establish longer-term working relationships with collaborative planning and not switch partners for 2¢ per pound.
Objective 2. (Continued)
Reduce Seasonality of the Lamb Industry

- Producers and feeders have several tools at their disposal to extend seasonality without jeopardizing meat quality
  - High or low intensity feeding regimens – depending on the harvest window
    - Extended use of grass and other forages to extend finishing
    - More rapid finishing with high concentrate feeds to accelerate finishing
  - Aseasonal breeding of ewes
    - Extensive research concludes that some breeds are very amenable to birthings every 8 months

- Producers must change genetics and lambing seasons, where feasible, to meet the seasonal variation in consumption

- To reduce seasonal volatility, packers should offer higher prices during periods of the year when they need more lambs.
Objective 2. (Continued)
Reduce Seasonality of the Lamb Industry

- Progressive producers will figure out how to meet those harvest windows to capture an economic incentive.

- After the price volatility of 2011-12, all segments of the value chain perceive value to less volatility and greater stability.

- Supply agreements enable producers / feeders to obtain credit more easily

- Retailers and foodservice operators prefer less fluctuation in prices
<table>

Objective 3. Long-Term Plan for Research and Producer Education

- Government budgets at all levels are under tremendous pressure
- Support for sheep research and producer education (Extension Service) has been declining for decades
- Decisions regarding research and producer education are made state-to-state, one year at a time
- Both research and producer education are critical for the long-term future of the U.S. sheep industry
- The sheep industry needs a long-term plan that is proactive, not reactive to budgetary pressures
Objective 3. (Continued)
Long-Term Plan for Research and Producer Education

- It is imperative that the Agricultural Research Service of USDA preserve all sheep research stations
- ASI is strongly advocating to maintain these important research centers
- It is also imperative that applied research continue at the land grant universities
- However, it may not be realistic to maintain research at all of the universities that currently have a half-time (or less) position in sheep research
- Two critical components of this initiative include:
  - A research and education strategy
  - Additional funding for research and education
Objective 3. (Continued)
Long-Term Plan for Research and Producer Education

The Roadmap Implementation Team should appoint a collaborative Research and Education Committee, including members of the academic community, to develop a long-term plan:

- What are the high priority research topics?

- What should be the respective roles of ARS and land grant universities in sheep research?
  - ARS focuses more on pure research?
  - The land grant universities focus on applied research?

- Can several consortia of land grant universities execute coordinated, collaborative applied research for their larger region?
  - Addressing specific issues unique to different regions and sheep production models

- Can private sources of funding be found?
To meet the goal of improving producer productivity, extensive effort will be required to provide the most effective method of producer education.

Without effective producer education, many producers will continue using outdated production practices.

State sheep associations and state Extension Service personnel should collaborate to develop a long-term plan for producer education that is best for their state.

In states with low sheep inventories, several states should consider developing a plan for a multi-state region.
Objective 3. (Continued)
Long-Term Plan for Research and Producer Education

Producer Productivity Groups: an ideal mechanism for producer education

- Voluntary groups of producers who share techniques and information
- Producers anonymously share annual production metrics to compare their experience with their peers
- The group gains access to the latest applied research findings and seeks to implement the recommendations
- Depending on the scope of activities, the group may hire a staff person to assist their collective and collaborative efforts to make productivity improvements
- Producers set annual goals and track their progress based on quantitative production metrics
Alternative mechanisms for producer education could include:

- Vibrant State Extension Service programs if budgets permit
- Private, for-profit sheep production consultants
- Regional seminars on sheep topics
- Internet websites and online chat rooms – producers helping producers
- Widespread distribution of applied research results in laymen’s terms written by the research community

The above mechanisms have value, but most lack the important ingredient of rigorous tracking of production metrics.
Objective 3. (Continued)
Long-Term Plan for Research and Producer Education

Funding of Research and Education

- Funding for sheep research and extension is declining fast
- The American Lamb Board should activate the “research part” of its mandate
- ALB should develop a process for funding research and extension proposals that address the critical goals of the Roadmap
  - Production efficiencies
  - Improving quality
- ALB should allocate funding for research and extension priorities starting in their fiscal year 2015

Slide 120
Objectives and Action Steps for Goal 4
Goal 4 – Industry Collaboration

**Goal** – Work toward a common industry goal of meeting consumer desires rather than short-term self-interest.

**Objectives:**

1. Initiate a Rapid Response, Industry-Wide Communications Team
Objective 1.
Rapid Response, Industry-Wide Communications Team

Objectives of the Team:

- To identify potential industry problem areas well in advance of the crisis stage.
- To recommend rapid response action steps to mitigate potential problems.
- To urge all relevant sectors and industry participants to contribute to industry-wide solutions to challenges.
- To seek the best interests of the entire U.S. sheep industry.
- To defuse tensions among the industry sectors.
Objective 1. (Continued)
Rapid Response, Industry-Wide Communications Team

- This will be an informal group with no authority, but, hopefully, considerable influence.

- It will not be incorporated. It is not a new “organization.”

- It will be highly flexible. During crises, it may meet via a weekly conference call. At other times it may meet quarterly, or anything in between.

- The group can invite anyone it wishes to join its meetings on an “as needed” basis, e.g., supermarket buyer, foodservice buyer, academic, breed association rep, extension personnel, government official, etc.
Objective 1. (Continued)
Rapid Response, Industry-Wide Communications Team

Proposed Representation on the Committee:

- American Sheep Industry Association – 2 reps
- American Lamb Board – 2 reps
- National Lamb Feeders Association – 1 rep
- Lamb packers – 1 or 2 reps
- Breakers – 1 or 2 reps

Each organization cited above appoints its own reps. The officers of ASI and ALB appoint the team members not representing an industry organization.
Objective 1. (Continued)
Rapid Response, Industry-Wide Communications Team

It must be emphasized that this group will not replace or direct any existing sheep industry organization.

It is meant to operate only through influence in three ways:

- Provide a vehicle for rapid response.
- Provide greater coordination among all of the industry sectors and industry organizations.
- Be able to discuss and suggest action on any issue of relevance to the U.S. sheep industry.
### Objective 1. (Continued)

Prioritizing the Objectives
Prioritization of 13 Initiatives

- Some industry participants feel 13 initiatives may be too many.

- However, no one industry segment or industry organization must take the lead on all 13 initiatives.

- Not all initiatives require high intensity efforts in any given year
  - Some are initiated quickly
  - Others rolled out more gradually

- The following slides indicate the intensity of the initiatives over the five years and which participants take the lead
### Intensity of Major Initiatives by Year

- **Major Activity**
- **Moderate Activity**
- **Low Level Activity**
Execution Process
The Realities of the U.S. Lamb Industry

- Many prior reports on the industry have been issued.
- These reports have resulted in limited change in the industry.
- This project, like previous ones, has no authority for mandating change.
- Furthermore, the lamb industry is one of the most traditional sectors of American agriculture.
  - The industry has not done well in adjusting to new challenges.
- Most industry participants are seen as protecting their own interests or, at best, those of their industry sector.
- There is still too much “finger-pointing” in the industry.
This project is about the beginning of a process – not about creating a report.

The report will be our initial Roadmap for the industry. But the Roadmap will change and evolve over time as new events occur and as the industry learns for the implementation effort.

We are at the beginning of a process.
A Lamb Industry Roadmap Implementation Team

Recommend the formation of a Roadmap Implementation Team

- **Roadmap Implementation Team**
  - Conducts monthly conference calls, Year 1 & 2
  - Probably bi-monthly conference calls thereafter
  - Asks for progress reports from Activity Captains of Roadmap
  - Solves problems as they arise
  - Prods participants to intensify activity

- **Annual Roadmap Revision**
  - Due to new developments in the industry
  - Based on learnings from prior year’s implementation work
A Lamb Industry Roadmap Implementation Team (Continued)

Membership of Roadmap Implementation Team

- ASI and ALB – 2 reps
- NLFA – 1 rep
- National Sheep Improvement Program – 1 rep
- National Sheep Industry Improvement Center – 1 rep
- Sheep Breed Associations – 1 rep
- State Sheep Associations – 2 reps
- Packers – 2 reps
- Fabricators – 2 reps
- Additional members, if needed, to enable balanced industry-wide representation – 3 reps
- Ad hoc input from other industry participants as needed

Work of Team done primarily on conference calls.

Each organization cited above appoints its own reps. The officers of ASI and ALB appoint the team members not representing an industry organization.
A Lamb Industry Roadmap Implementation Team (Continued)

Given the track record of the industry at making change, the American Lamb Board has asked Bob Ludwig of The Hale Group to play a role in the Roadmap Implementation Team:

- Year 1 – Bob Ludwig serves as Chair to start implementation
- Year 2 – Bob Ludwig serves on the team, but not as Chair
- Year 3 – Bob Ludwig has no seat on the Team
Recommendations for Execution

American Sheep Convention, 2014

- The Hale Group presents the “The Lamb Industry Roadmap.”
- Numerous industry participants state briefly their plans to implement the roadmap in their organization:
  - Large and small producers
  - Large and small feeders
  - Large and small packers
  - Large and small fabricators
  - ASI, ALB, State Associations, NSIP
- Break-out groups discuss various goals and objectives of the Roadmap
Year 1

The Roadmap Implementation Team

- Conduct calls every month
- Monitor all industry participants’ progress on implementation
- Make adjustments as needed
- Call people to account for making recommended changes

All Sheep Industry Organizations

- Devote a significant amount of time at each meeting to issues of Roadmap Implementation
Subsequent Sheep Industry Conventions, 2015-2019

- Focus a significant number of the plenary and workshop sessions on Roadmap implementation

- Devote a significant amount of time to reporting on the progress of Roadmap implementation
  - A State of the Sheep Industry Address each year
    - Calling out successes
    - Calling out failures to execute
  - Multiple reports from various industry participants on:
    - Progress by their organization
    - Plans for their organizations
The Magnitude of the Change

- This will require a major “sea change” for the lamb industry.
- Tweaking the dials will not be enough.
- Every participant in the American lamb industry will have to change the way they do business.
- It will be messy.
- It will be painful.

This plan, or something similar to it, is the industry’s only option.
